

Portable Hose washing attachment

The hose washing attachment is able to wash the hoses without damaging them by rubbing. Two conical pressure jets wash the hoses twice during the passage inside it; by inserting the hose on the side indicated by the arrow you will have a rapid flow caused by the jets of water. This equipment with reduced dimensions has been designed in order to give t the opportunity to the fire-fighters to clean immediately the fire-fighting hoses after their use, before being stored in the loading compartments.

The small size of the hose washing attachment facilitates its placement on all the fire-fighting vehicles supplied to the National Fire Brigade. For its operation is required the pressure of 4 or 6 bar.

Construction material: aluminum alloy

Dimensions 235x220x270

Weight kg. 6.5

Power connection on request: 2" gas M./ UNI 45 FG / UNI 70 FG

Code 10.0204.004
