

Emergency lighting kit Pulsar Pro

Supplied in a practical case with 5 lamps and battery charger, this version of Pulsar Pro has the advantage of having a **SEQUENTIAL** flash operating mode that can be activated with a button inside the case. This provides a **directional effect**, designed for traffic control, hazard warning, zone demarcations and parked vehicle safety.

Ideal for professional applications, including Police, Fire and Highway services. The system can be implemented by linking it with other kits to produce longer corridors of flashing light.

Rechargeable LED lamps are small but robust, made of impact-resistant plastic, waterproof (up to 10 metres) and virtually indestructible (they can withstand most vehicle weights if crushed). Equipped with built-in magnets that allow attachment to vehicles or metal surfaces.

FEATURES :

Visible from over 1 km.

Rechargeable lithium battery

360° lighting

9 light modes + sequential

Up to 60 hours and in sequential mode for 15 hours continuously

Waterproof up to 10 mt.

IP65 rating

It floats in the water

The LED lights up red when charging, blue after 3 hours of charging

Magnetic back

Working temperature -40° to 60°C

Dimensions: diameter 110 mm h. 24 mm, weight 200 gr. each

Complete case weight: 2.7 kg.
