

EXTRICATION KIT INFOREST

Set of tools for extrication and forced opening. The tool set consists of: an extendable power handle where the seven different types of tips are interchangeable for the task or job you want to do; tips; chisel; knife and Hooligan type tips.

The entire set is sold in an aluminum case with its own internal housing for each tip or accessory, so that it can be transported to any position and the opening and display of each component quickly.

The striking handle is made of steel with a baked-on finish and is adjustable in length by a manually adjustable clamp to improve leverage.

The various tips are made of forged steel, heat treated and chrome plated, giving them long life. The different functions are obtained by changing the tips without tools, just with a manual coupling.

Dimension of the case: 810 x 350 x 100 mm.
