

FIREMAN AXE WITH FIBERGLASS HANDLE INFORREST

This tool is essential to protect every firefighters when they enter into a burning building.

The ax is realized with forged and heat-treated steel to obtain hardness (50-55 RC) in the external area of the edge and maintain the ductility of the interior. The fiberglass handle minimizes the transmission of vibrations in the event of impact, reducing damage to the user.

The fiber ends provide perfect balance and a secure grip, which makes use more effective, requiring less effort to achieve the same result as other tools on the market.

The ax has an edge area for impact cuts and a tip area to be able to penetrate and pull hard objects or elements, giving the possibility of breaking windows, doors and dry constructions.

Weight: 4 kg
Length: 900 mm
Handle: fiberglass with non-slip rubber grip
