

## BUBBLE CUP Foam Nozzles Medium Pressure

A unique combination nozzle capable of producing aspirated finished foam, conventional straight stream and a wide fog pattern. To use the **integrated aspirating foam-adapter** of the nozzle, the operator slides the outer sleeve forward: in this way the lance will create a "Venturi effect" and generate excellent foam. If an immediate wide fog pattern is needed, the sleeve can be retracted and adjusted instantly to its regular position.

The BUBBLE CUP offers versatility that is not found in any other nozzle.

All BUBBLE CUP nozzles have dual flow with two selectable flow settings; are in hard coat anodized aluminium. Ball valve in stainless steel.

Supplied with UNI 45 female swivel connection.

Model	Flow rate	Pistol grip	Body size	Operating pressure	Weight (without coupling)
DS1040BCP	38-150 l/min	si	1"	7 bar	Kg. 0,9
FS2060BCP	75-230 l/min	si	1,5"	7 bar	Kg. 1,5
FS2095BCP	75-360 l/min	si	1,5"	7 bar	Kg. 1,5
