

Double bit axe with fiberglass handle *Inforest*

Double bit axe is an ideal tool to open firebreaks and clear burnt areas.

DESIGN AND MATERIALS

This tool is designed to ensure balance of weight and comfort to the user. To this end, it is produced with a fiberglass handle with a rubber grip that guarantees a good grip and reduces the vibrations of the axe hit, preventing joint injuries.

The fiberglass handle ensures little maintenance without losing resistance, and the double-edge head allows it to double its productivity without the need to sharpen it again, or to use each edge in different angles for different types of wood.

The axe's head is made of forged steel providing hardness to the edges (50-55 RC), but maintaining ductility in the area where the handle is inserted into the head (30-35 RC). The aim is to always transmit the least amount of vibration to the user, achieving a piece that optimally responds to the demands of our customers as regards both durability and convenience.

Weight: 2,9 kg

Length: 930 mm

Material: 1045 steel

Handle: injected fiberglass with rubber grip

Code 70.0101.062
