

Fire Fighting Wildland Mask

This **wildland firefighting face mask** is designed to cover commercial masks, disposable or half masks, depending on the model you choose to use when fighting fires.

Our product serves the function of containing the air filter element and giving it greater heat resistance, while providing a softer touch on the skin.

In the nose area it has an adjustment that allows it to adapt to the septum. It also features elasticated areas to improve the fit on the face and around the perimeter of the head. The closure and fastening is done via Velcro, which allows you to put it on or take it off without removing other personal protective equipment. These features allow for a perfect fit for each user, offering greater comfort during use.

It has a Velcro strap to hang it around your neck.
