

Triangle hoe *Inforest*

Our **Hoe** is used for digging, removing soil and creating fire lines. This tool is made up of a steel plate, provided with a conical shank in its central part welded to the plate to fit perpendicularly to an ergonomic fiberglass handle.

BLADE

It consists of an anti-wear alloy steel plate with the following dimensions: 6 mm thick, 142 mm wide at the left end, 36 mm wide at its right end, and 233 mm long.

Edge: both ends are sharpened through simple beveling (45°) along its entire length.

Hardness: the material of the blade is alloy steel especially resistant to wear, so it does not require an additional heat treatment, which exerts tension on the material.

It has a hardness from 44 to 46 HRc.

HANDLE

Ergonomically-designed handle. Its total length is 1.20 mt. It is a hollow straight tubular fiberglass handle reinforced with resin and over-extruded with HDPE (High Density Polyethylene). It has anti-slip parts which improve the grip and reduce the transmission of vibration to the user.

Weight: 2,2 kg.

Length: 1,2 mt.

Handle: fiberglass over-extruded with HDPE (on request available in wood)
