

## 'DAY PACK' EQUIPMENT BACKPACK *INFOREST*

**Day Pack** is designed to carry the elements needed during work days fighting wild-fires. It can be adjusted according to the user's needs. The base harness has a unique ergonomic design that ensures a perfect fit because its height and circumference can be adapted, reducing fatigue due to load. The Day Pack is highly useful and facilitates the preservation and transport of personal items. It does not interfere with the job and, in contrast to traditional backpacks, it does not produce heat in the back.

### MATERIALS

It is made of polyamide 420Dx420D with PU coating. Fabric certified under the NFPA 701 standard. This material, specially manufactured for *Infoforest*, has high mechanical resistance, a smooth surface on which dust and dirt slide, and low weight. The seams are reinforced and made with nylon thread.

### POCKETS

It has a main compartment with waterproof zippers, and external and internal pockets. It has a specific pocket to place and transport a hydration water bag in a space separate from of the main compartment to avoid punctures of the containing bag. In its lower area, it has compartment that can be detached through the MOLLE system so that the Fire Shelter system can be mounted instead, thanks to a Velcro® fastening system.

It has side pockets with zippers to transport materials, and a flap pocket to place and transport bottles, torches, or other objects. At the bottom of these pockets, there are eyelets that allow fluids and dirt to pass through in order to prevent them from accumulating there.

Volume: 21 lt.

Dimensions: 26 x 16 x 35 cm.

Weight: less than 1,50 kg.
